

serial number	test scenario (positive)	test scenario (negative)
1	verify the all parts of the fan is fitting properly and no loose fitting	verify the whether the object looks like a fan
2	verify the fan blade is fitted properly	verify the fan body must not be too thick or too thin
3	verify the type of fan whether it is table fan or celling fan	verify the look and feel must be good
4	check the speed varies when regulator adjusted	check if there is any life time of fan's internal parts or the body
5	verify the speed of the fan is controlled by the regulator	
6	verify the fan should always work in clock-wise direction	
7	verify the fan works normally-throws wind on the right direction	
8	verify the fan is stopped only if electric switch off	
9	verify the fan is started only if electric switch on	
10	verify the time required to reached to it maximum speed when fan is switched on	
11	verify the voltage/power requirement of the fan as per mentioned in the requirement	
12	verify that when in motion, the fan should not wobble
